

SAP Reimagined Certifications - SAP HANA

What's in it for me?

Hay Bouten, SAP

Agenda

- Reimagining Certification in the AI Era
- What are System-based Practical Exams?
- ‘Live’ Exam Demo – Database Administrator – SAP HANA
- SAP Learning Links
 - Database Administrator – SAP HANA
 - Data Engineer – SAP HANA
 - Certification Generic

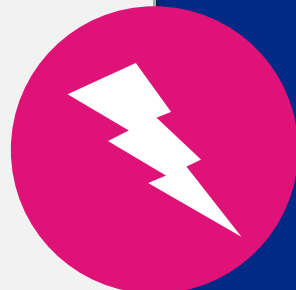

Reimagining Certification in the AI Era

SAP Certification has moved from knowledge validation to **performance-based skills validation** with practical assessments in real-world scenarios.

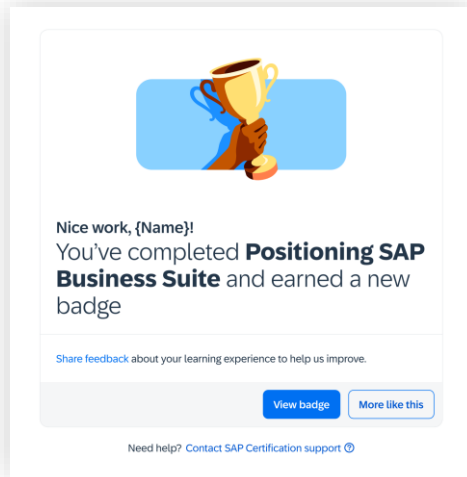

A pink, rounded square character with a smiling face, large eyes, and a wide grin. It has five pink vertical bars on its head and five pink horizontal bars on its back. The character is wearing white gloves and shoes with pink accents. It is holding a silver laptop in its left hand. The text "hana" is written in white on its chest, and "tech con" is written in pink below it. The entire character is enclosed within a pink circular border.

SAP Professionals' Work Reality

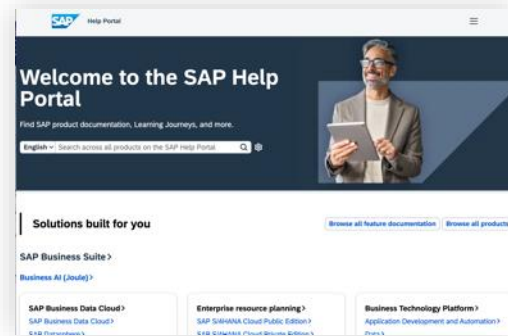

What are System-based Practical Exams?

The Key Facts

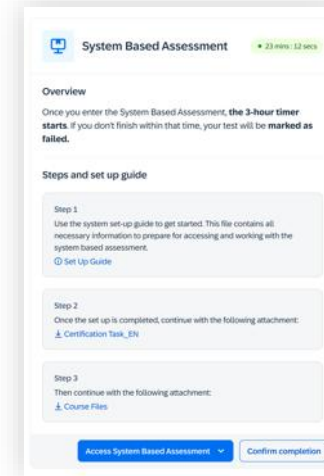

Non-proctored exam

Software-based monitoring.
Get secure validation of results.

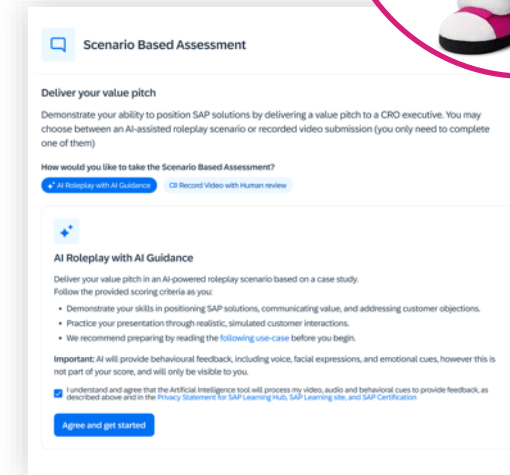

Open-book model

You can use [SAP Help Portal](#), [SAP Joule for Consultants](#), and other tools and resources as you choose, just as you would on actual projects.

System-based assessments

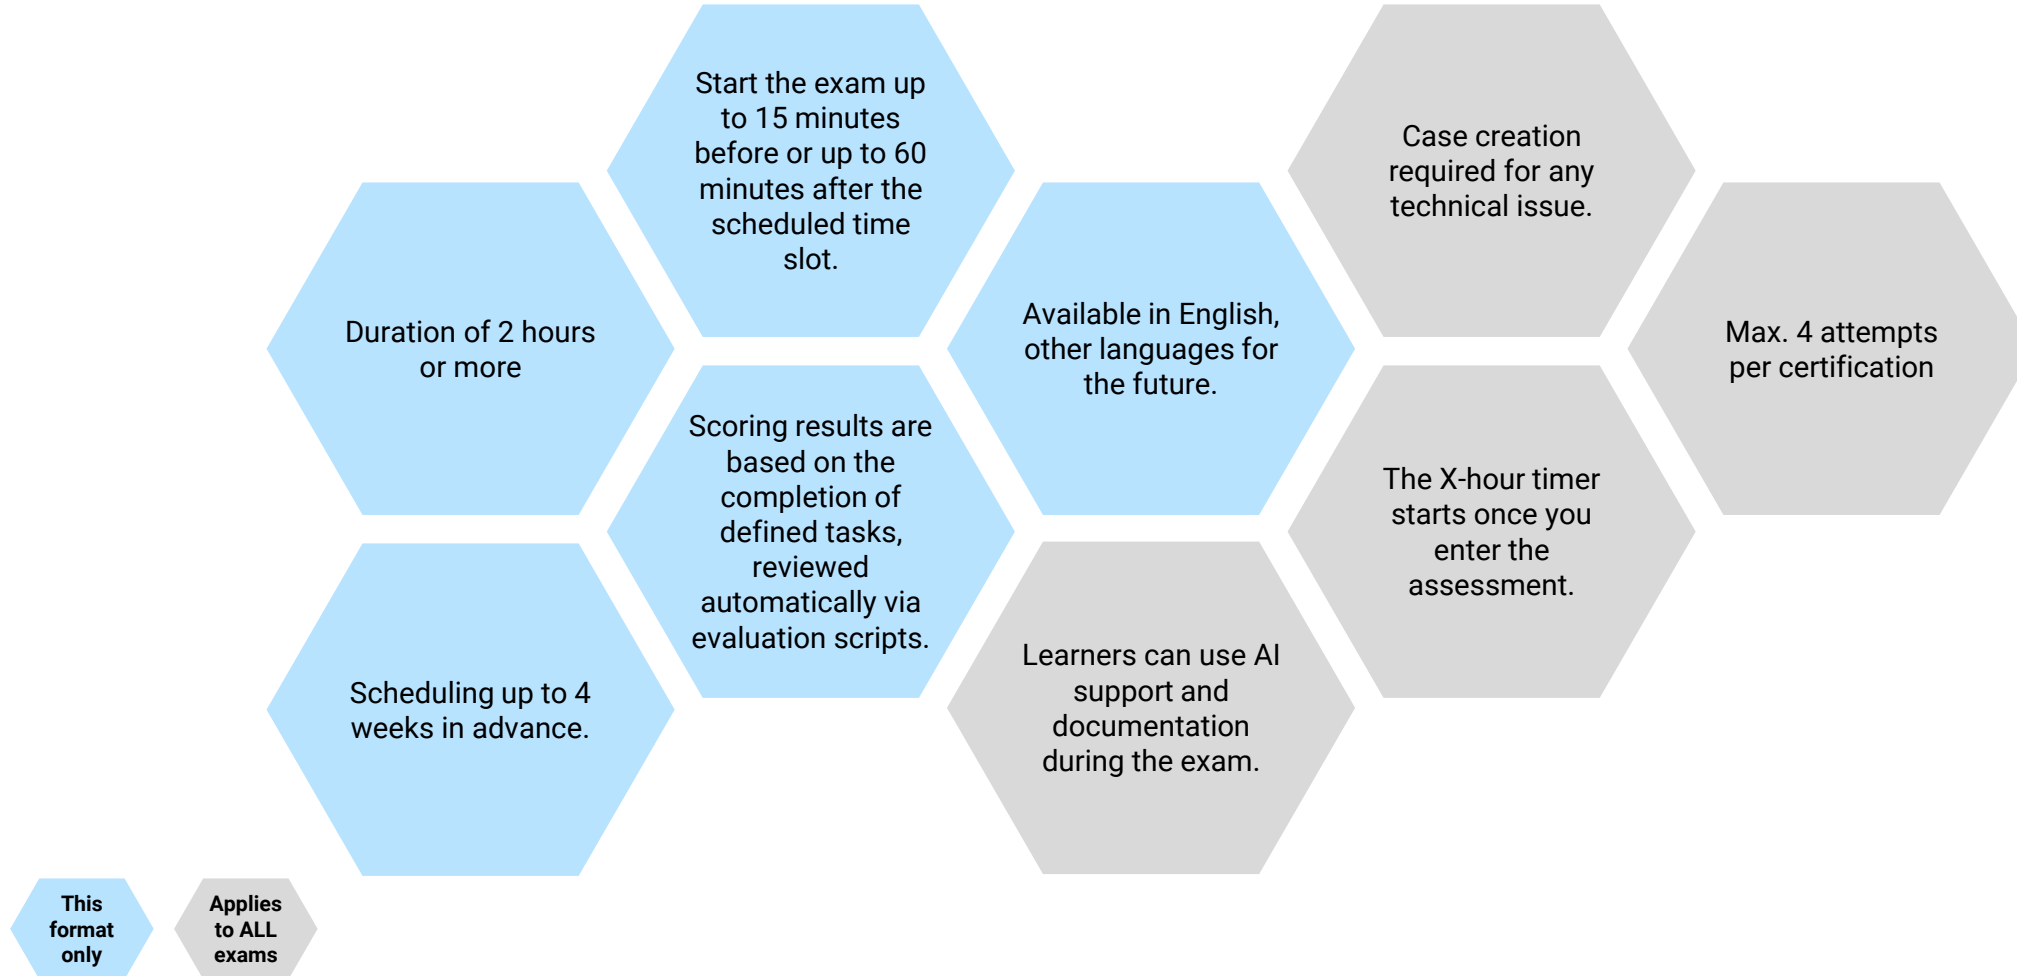

Complete tasks in authentic SAP software environments to validate skills in a 100% practical, timeboxed exam.

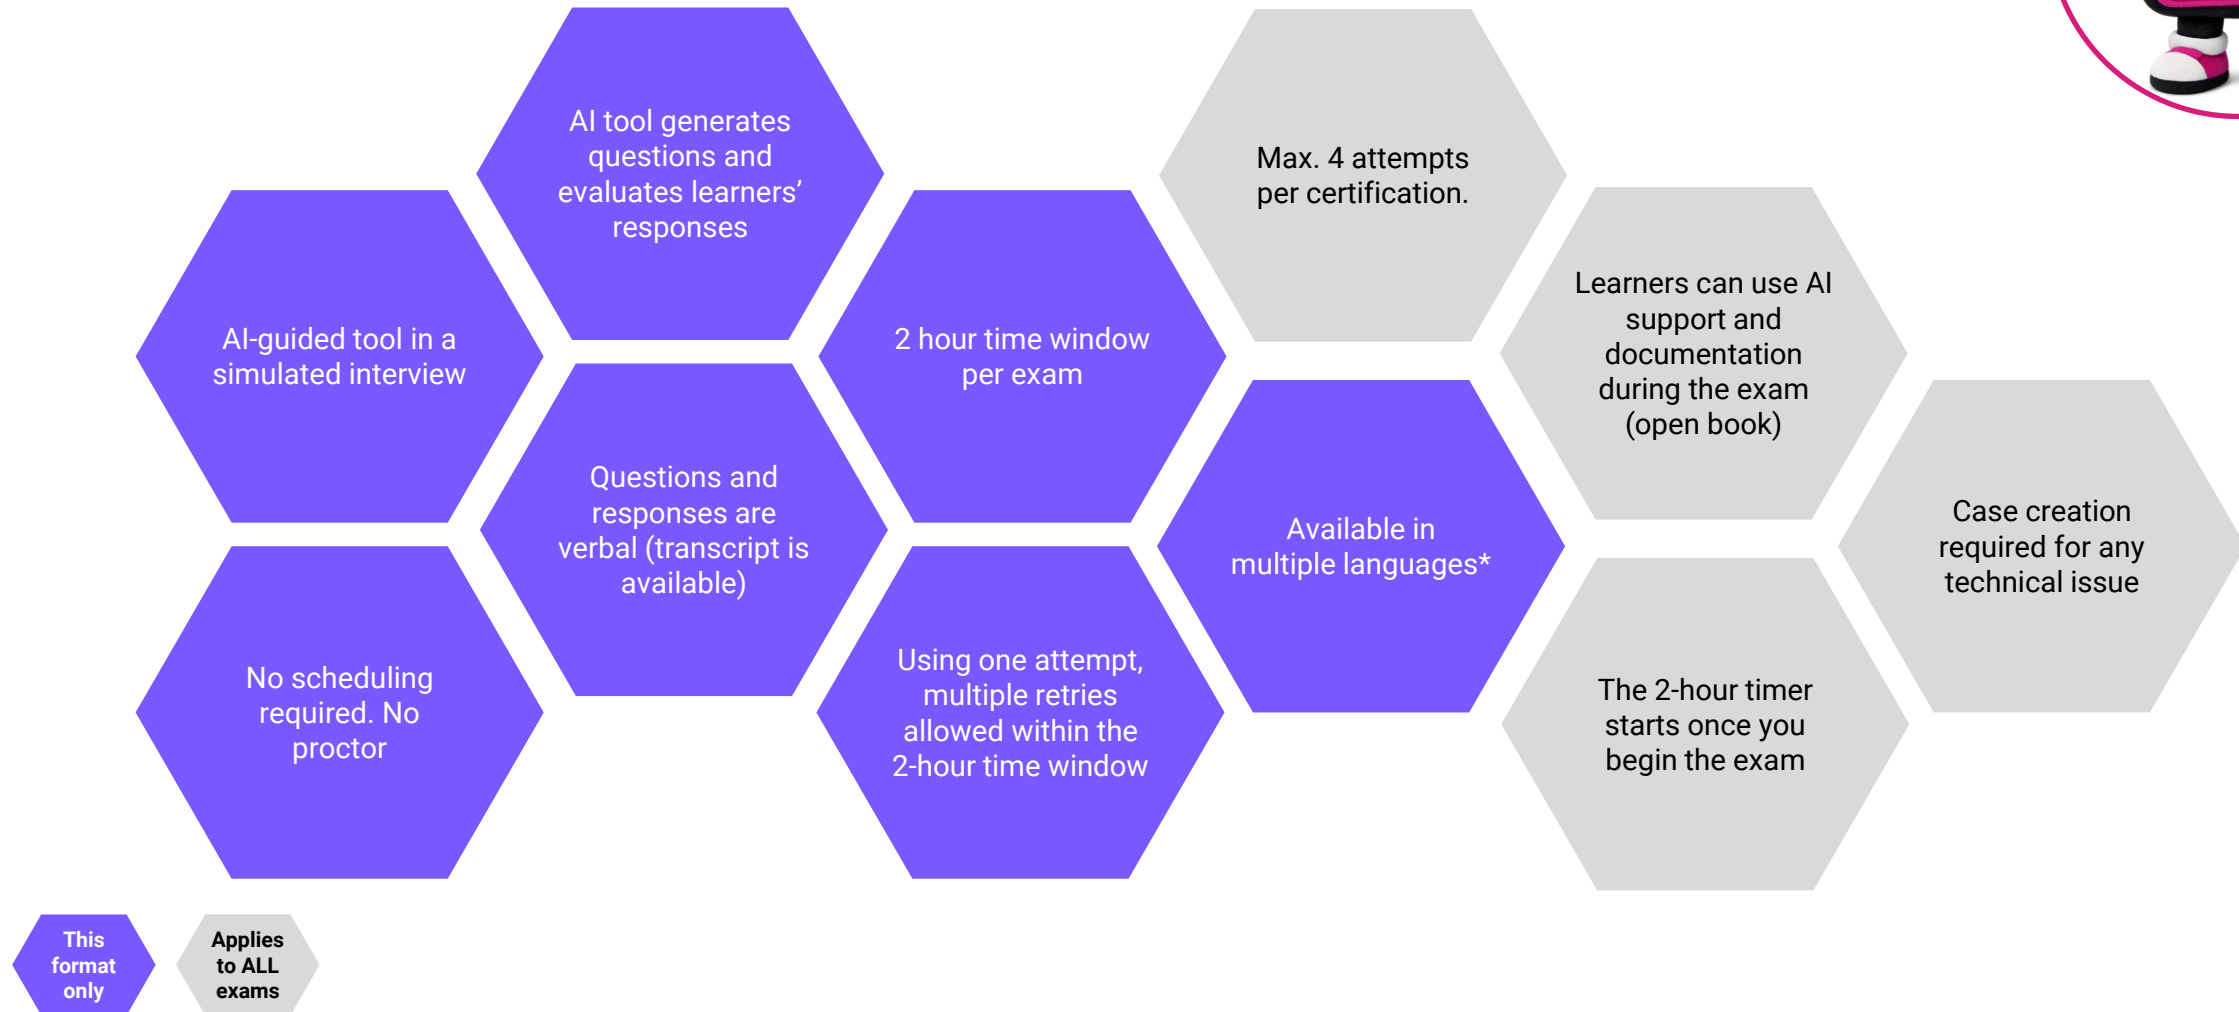

Scenario-based assessments

Engage in timed, interactive simulations with AI guidance or video and human review.

System-Based Certifications – Need to know

Scenario-Based Certifications – Need to know

SAP CERTIFICATION • C_DBADM

SAP Certified - Database Administrator - SAP HANA

Overview

This certification validates that you possess the essential database administration skills required for managing SAP HANA Cloud and SAP HANA on-premises databases. Achieving this certification demonstrates an in-depth understanding of deploying and upgrading SAP HANA databases, configuring and optimizing database performance, monitoring and troubleshooting the database, and implementing the backup and recovery process.

Products and Roles

Administrator
